/done standscribed using Superscript II and an anchoro aste, oligo dT primer, containing a NOTI restriction and conditions to standard protocols. Blunt second strand cDNA was digested with NOTI restriction endonuclease, purified and size fractionated with a SizeSep 400 spun column (Ameraham) and directionally cloned into the Smal and NotI sites of pBluescript SK. Following electroporation into BlectronTen Blue cells (Stratagene), 5 x 106 primary CTW were bottle amplified in semisolid culture media (ZxLB+15% SeaPrep agarosed (BMA)].
After 48 hrs at 30 degrees Celcius, cells were harvested,

Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 297480-302087, 682632-687239, 726408-728711, and 729096-731399. Subtraction by Bento Soares and M. Fatima Bonaldo. "

             normalization to a Cot = 53. Library constructed by Bento Soares and M.Fatima Bonaldo. The adult brain RNA was provided by Dr. Donald H. Gilden. Tissue was acquired 17-18 hours after death which occurred in consequence of ruptured aortic aneurysm. RNA was prepared from a pool of tissues representing the following areas of the brain: frontal, parietal, temporal and occipital cortex from the left and right hemispheres, subcortical white matter, bassal ganglia, thalamus, cerebellum, midbrain, pons and medulla."
